A. Content & Audience

1. My classmates were aware that the purpose of my website, QuickCards, is to help students create and study flashcards online in a timely manner. Although they like how the homepage made the goal apparent, they recommended adding more subject examples to make the website seem more relevant and targeted at college students.

B. Design & User Experience

2. Peers responded positively to the clean layout, warm color palette, and organized structure. They said the gold and brown tones felt unique and professional. Some suggested slightly increasing text contrast and spacing for easier reading on smaller screens. Overall, they found the design effective and engaging.

C. Functionality & Performance

3. They saw that every page and link loaded rapidly and functioned as intended. One peer, however, pointed out that if the generator page's preview images were further compressed, they might load more quickly. Another proposed increasing the visibility of the "Generate Flashcards" option on mobile devices.

D. Accessibility & Usability

4. Recommendations included enhancing the color contrast between the text and background and providing more detailed alt text for photographs. Additionally, they talked about making sure the buttons and form are simple to use with a keyboard or screen reader.

E. Action Plan

Peers liked the site's simplicity, color scheme, and how easy it is to navigate.
Two improvements I will make:

1. **Improve Accessibility:** Update all image alt text and ensure contrast ratios meet WCAG guidelines.

2. **Enhance Clarity:** Add a short tagline or example topics on the homepage to show who the site is for and what subjects can be studied.

   5.
